WM-1036

Chemical overview

CAS #	Mixture
EINECS #	-
APPLICATIONS	Construction Chemicals , Industrial Chemicals , Admixtures , Cements , Concrete , WEGO-MAX
CATEGORIES	Construction Chemicals, Industrial Chemicals
DESCRIPTION	<p>An admixture used to improve early strength development of cement and concrete products. It is mainly used for precast concrete and concrete engineering projects with high requirements for early strength development. After mixed with cement substrate mixture, WM-1036 will quickly combine cement mineral components of hydrated crystallization products and promote its rapid growth in the cement particles to form a stable dense support structure, quickly obtain early strength. Green, non-chlorine, and non-flammable. Production of liquid cement grinding aid with this raw material, can completely replace the original formulation of organic compound can also be partially replaced. This product does not react with other components in the conventional grinding aids and has stable performance, and can provide the recommended finished product compounding process according to customer requirements. Mixed with other materials to make cement grinding aids, early and late strength of cement can significantly improve, while reducing the cost of grinding aids and cement.</p>
