WM-1070B

Chemical overview

CAS #	Mixture
EINECS #	-
APPLICATIONS	Construction Chemicals , Industrial Chemicals , Reducing Agents , Cements , WEGO-MAX
CATEGORIES	Construction Chemicals, Industrial Chemicals
DESCRIPTION	<p>WM-1070 are toughening agents for cement based materials. WM-1070B is an innovative polyether ester that improves flexural strength and toughness of the cement-based material, also ensuring water reduction. It can be used in cement base materials that require high strength levels, i.e. used in large traffic volume highways, airports, factories, etc. WM-1070 products are both strong in crack prevention. When combined, they create stereoscopic static structures, with closer cement particles, maintaining higher water-reducing performance levels. They also increase molecular structure of cement adhesives, effectively improving flexural strength and reducing cracking. Toughening performance. Can significantly improve the flexural strength of cement-based materials. Water reducing performance. Excellent dispersion properties to cement and other cement-based materials. Anti-cracking performance. Effectively prevents cracking of cement-based materials.</p>
